Why Do We Prune Roses? (1/11/2020)

by Anne Skinner, UCCE Master Gardeners

The basics of rose pruning are science based. Once learned, these basics require a fair amount of time and labor. Additionally, a certain degree of artistry is required. The resulting beautiful flowers are definitely a reward, but why do we take on this gardening task?

A rose bush will survive without an annual pruning during its dormant period. It will, however, become a weak, poorly shaped plant with smaller blooms. It will look neglected and be prone to pests and diseases. Pruning removes dead and diseased canes and triggers new buds to push at the base so that new vigorous canes can form.

The basics of rose pruning are not difficult to learn, and unlike a tree, roses will rarely be permanently damaged during the learning process. One important feature to learn is identifying the anatomy of the rose bush. Other than old-fashioned roses or many miniature roses, most rose bushes are a combination of a rootstock variety grafted to a desirable rose flower variety. Pruning off the grafted portion of the bush down to the graft union will result in the vigorous rootstock taking over, and there will not be the anticipated blooms of the desirable variety. The rootstock is chosen for its vigor or disease resistance but will often produce a large shrub with small flowers.

Pruning Basics

- 1. Use sharp, clean, by-pass pruning shears and long-handled lopping shears.
- 2. Remove small twiggy growth and dead, diseased or crossing canes.
- 3. Remove suckers by digging down to their start below the bud union and pulling them off.
- 4. Remove canes in the center of the plant to create a vase shape.
- 5. Choose 3-6 healthy outside canes per plant to keep and leave 3-5 buds on each cane.
- 6. The new shoot will grow in the direction the top bud points, so try to cut to an outside bud. Cut on a diagonal about ¼ inch above the bud.
- 7. Remove every leaf from the newly pruned bush. Clean all leaves and debris away from the base of the plant.
- 8. Consider applying an insecticidal soap or horticultural oil after pruning and while the rose is dormant. Soaps and oils smother overwintering scales and insect eggs; they are also the least harmful products to beneficial insects.
- 9. Apply a layer of mulch at least 2-3 inches deep over the garden, keeping it away from the base of the plant.
- 10. Four to six weeks after pruning, apply a fertilizer recommended for roses just prior to rainfall, or water deeply after application.

You can review the pruning basics here and look up "Ten Steps to Beautiful Roses" on the Master Gardener web site:

https://ucanr.edu/sites/UC_Master_Gardeners/Roses_Roses_Roses_863/.

From this page you can access several rose-related topics and archived newspaper articles, as well as additional care tips available from UC Integrated Pest Management.

There are basic pruning techniques, but rose bushes do not always grow just like the picture in a book. You may also want to prune

However, reading articles will not give you the same confidence and technique as coming out to a hands-on demonstration, where Master Gardeners will be pruning hybrid teas, floribundas, grandifloras and miniature roses! You can bring your pruners and gloves and work along with Master Gardeners to really gain a feel for the pruning process and to have your specific questions answered.

I hope to see you at an upcoming pruning demonstration!

Rose Pruning Demonstrations:

Visalia:

Tulare County Courthouse Rose Garden

Saturday, January 18 11:00 am to 2:00 pm 221 S. Mooney Blvd., Visalia

Ralph Moore Rose Pruning Demo

Saturday, January 18 11:00 am to 2:00 pm W. Main and N. Hall St., Visalia

Hanford:

Grangeville Rose Pruning Demo

Monday, January 20 11:00 am to 2:00 pm Old Grangeville Church 14060 Hackett St., Hanford

Woodlake Rose Garden Pruning Demo

Saturday, January 25 11:00 am to 2:00 pm

Next to Bravo Lake Botanical Garden, Woodlake

The UCCE Master Gardeners will be available to answer your gardening questions at the following venues in January & February:

Visalia Farmers' Market – Every Saturday morning (8-11 am), Sears parking lot, Mooney Blvd. Feb 1, 11:00 - 1:00, Fruit Tree Pruning Workshop, Hurley School, Visalia Feb 7-9, Visalia Home & Patio Springfest, Visalia Convention Center Feb 11-13, World Ag Expo, Tulare

For answers to all your home gardening questions, call the Master Gardeners in Tulare County at (559) 684-3325, Tuesdays and Thursdays between 9:30 and 11:30 am; or Kings County at (559) 852-2736, Thursday Only, 9:30-11:30 am; or visit our website to search past articles, find links to UC gardening information, or to email us with your questions: http://ucanr.edu/sites/UC_Master_Gardeners/
