What’s New in Codling Moth Control

Janet Caprile
Farm Advisor
UC Cooperative Extension
Contra Costa Co

Apple Institute - March 21, 2006
Codling Moth Control Tool box

- Pheromones
- Biological Control
- Sprays
Codling Moth Control Tool box

Sprays

Traditional Materials

Organophosphates
- Guthion
- Imidan

Carbamates
- Sevin
Codling Moth Control Tool box

Traditional Materials

**Issues**

- Environmental concerns
- Safety concerns
- Hard on beneficials --> secondary pest outbreaks
- Resistance

Sprays
Codling Moth Control Tool box

New Types of Materials

Chloronicotinyls

Insect Growth Regulators

Unique modes of action

- Reduced risk
  - Environment
  - Less toxic to people
- Narrower spectrum
- Softer on beneficials

Sprays
Codling Moth Control Tool box

New Materials

Chloronicotinyls
- Contact materials
- Some have CM efficacy
  - Assail
  - Calypso
  - Clutch

Sprays
Codling Moth Control Tool box

Sprays

Chloronicotinyls

Assail

- CA Reg 2003
- Similar to Imidan (~75% CM control)
- Category IV: Caution
- REI: 12 hours
- PHI: 7 days
- Apply at 250 DD + 14 days
- Toxic to CM eggs & larva
- Also LH, GAA, (RAA, WAA); not LR
- Watch for mites

Watch for mites
Codling Moth Control Tool box

Chloronicotinyls

Calypso

- CA Reg 9/05
- Similar to Assail for CM (~70% CM control)
- Category II: Warning
- REI: 12 hours
- PHI: 30 days
- Apply at 250 DD + 14 days
- Toxic to CM eggs & larva
- Also for RAA, GAA, (LH); not WAA, LR
Codling Moth Control Tool box

Chloronicotinyls

Sprays

Clutch
- CA Reg April 2005
- Modest CM control (~50%)
- Very little field testing
- Category IV: Caution
- REI: 12 hours
- PHI: 7 days
- Labeled for aphid, LH, LM
Codling Moth Control Tool box

New Materials

Insect Growth Regulators

- No contact activity
- Must be eaten
- Interfere with insect development
- May not kill immediately
- Usually stop feeding quickly
  - Intrepid
  - Esteem

Sprays
Codling Moth Control Tool box

**Insect Growth Regulators**

**Intrepid**
- CA Reg: May 2003
- For lower pressure CM sites (~65% CM control)
- Category IV: Caution
- REI: 4 hours; PHI: 14 days
- Prevents molting
- Toxic to eggs laid before/after
- Apply at 75-250 DD
- Also: LR

Sprays
Codling Moth Control Tool box

Insect Growth Regulators

Esteem/Sieze

- CA Reg: 2002
- CM suppression (~40% CM control)
- Shorter residual than Intrepid
- Category IV: Caution
- REI: 12 hours; PHI: 45 days
- Toxic to eggs laid after
- Apply at 75-100 DD
- Also: **SJS** and LR, (RAA?)

Sprays
Codling Moth Control Tool box

Sprays

Other RR Insecticides
- Success/Entrust
- Oil
- Surround
- Granulosis
Codling Moth Control Tool box

Other RR Insecticides

Success/Entrust (organic)

- Fermented from a fungus
- For low CM pressure sites
- 1% oil increases efficacy
- Reapplication: 10-14 days
- Not a contact – must eat
- Category IV: Caution
- REI: 4 hours; PHI: 7 day
- 3 application limit/year
- Also for LR, LM, thrips
Codling Moth Control Tool box

Other RR Insecticides

Summer Oil

- Suffocates eggs, no residual
- 0.25%-1%
- CM suppression
  (~45% CM control)
- Apply every 150-200 DD
- Organic option
- Impacts on fruit finish, vigor?, sunburn? w/season long use
- Phytotoxic with sulfur
- Also for mite, LH suppression
Codling Moth Control Tool box

Other RR Insecticides

CM Granulosis virus
- CydX, Carposvirosine, Virosoft
- CA Reg: pending for 2006!
- For lower pressure CM sites
- Short residual – use lower rate, reapply frequently (7-10 days)
- Organic option
- Alternate w/ Entrust
- Use to supplement MD
- Reduces the next generation

Sprays
Codling Moth Control Tool box

Other RR Insecticides

Surround

- Particle film: kaolin clay
- CM suppression (~55% control – 3 sprays/gen)
- Not toxic - barrier
- Impacts on beneficials?
- Organic option
- Drift very obvious
- Residue on fruit
- Corrosive to nozzles
- Expensive - season long

Sprays
Codling Moth Control Tool box

Future RR Sprays

- Warrior (pyrethroid)
  - Good contact, short residual

- Proclaim (glycoside [Agri-mek])
  - Very toxic to young CM
  - Delayed kill (fruit damage)
  - Longer residual

- GF-1640
  - Control similar to Guthion!
  - Not registered yet
Codling Moth Control Tool box

Other RR Sprays

Sprayable Pheromones

- 3M Micro Encapsulated sprayable pheromone disrupts mating
- Not photo stable – very short residual
- Not recommended for apples
Codling Moth Control Tool box

**Pheromone Products**

**MATING DISRUPTION**
- Isomate (200/A, 400/A)
- Checkmate CM (200/A)
- No Mate spiral (400/A)
- Disrupt CM (200/A)
- Suterra puffers (1/A)

**ATTRACT & KILL**
- Last Call (1200/A)
Codling Moth Control Tool box

**New Pheromone Products**

**MATING DISRUPTION**

Cide-trak CM (Trece)

- Pheromone & pear ester
- Field trials promising
- May enhance disruption
- Available in 2007?
Codling Moth Control Tool box

New Monitoring Products for MATING DISRUPTION

- DA lure (pear ester)
Codling Moth Control Tool box

New Monitoring Products for MATING DISRUPTION

- Combo lure (pear ester + pheromone)
Bio-control Tool box

Mastrus ridibundus

Trichogramma platneri

Granulosis virus
**Mastrus ridibundus**

- Larval parasitoid
- Attacks the over wintering generation in soil, bark crevices
- Releases from 1998-2003
- Reduces CM populations for 1-2 years in walnuts
- Apples: use as a supplement to organic program
- **NOT AVAILABLE AT INSECTORIES**
**Trichogramma platneri**

- Native to the Western US
- An egg parasite
- Augmentive releases

UC Statewide IPM Project
© Regents, University of California
Trichogramma platneri

Effectiveness:

- 10-60% damage reduction
- Pears & walnuts > apples
- Handling issues
  - Predation
  - Water & sun exposure
  - Hatch timing
  - Application timing
  - Distribution uniformity
- Best as a supplemental method
Trichogramma platneri

Aerial Application

- For larger acreages
- Less predation
- Better distribution
- Handling issues
- Specialized equipment
