

Nematode Trial Field Day

Thursday August 17, 2017

10:00 AM

UC Cooperative Extension Research Farm

Corner of Mettler and Madera Aves, (just north of Shafter)

We have some exciting results to demonstrate from the tomato nematode trial we just completed. Although the test crop was tomatoes, these results will be of interest to anyone that has nematode issues in their field. Whether you grow field crops, vegetables or permanent crops you will see how effective these new nematicides are under even extreme nematode pressure. These products are now being released and are registered on several crops. But the list of crops will be expanding for each of these new non-fumigant nematicides. We hope to have representatives from each of the manufactures, Bayer, Adama and DuPont, present to answer any questions.

We apologize for the short notification of this field day but promise it will be worth your while to see how well these new non-fumigant nematicides perform.

Joe Nunez

Vegetable Farm Advisor, Emeritus
