## GROWING CULINARY HERBS

Please join us for a **FREE** talk at the Willow Glen Library!

*Join **UCCE Master Gardener Ann Ranish** and learn how easy it is to grow your own herbs to add lively flavor to your meal! Some culinary herbs grow well in vegetable gardens; others are good companions for drought-tolerant ornamentals. For those with limited space, herbs are also easily grown in containers. Since many of us are concerned about the loss of bees, you'll learn how one simple way to create a bee garden is to plant an herb garden. Not only will you help the bees, but you'll also have fresh herbs for cooking the food that bee pollination has provided. Let your herbs flower and you're all set; cut the flowers off as they fade to ensure repeat bloom. Feel free to bring your questions!*
