

Deer Resistant Plants

UCCE Master Gardeners of the Sierra Foothills

Fact: There are no deer resistant plants. But there are plants that most deer will not eat if there is an abundance of food. Most of the plants listed in this document will not be eaten by deer if there is another choice; however this is not a guarantee they won't at least take a sample now and then.

When selecting plants from this list for your landscape be sure that all of the planting criteria are met: temperature, light, moisture and not just the deer tolerant need. Some of these plants may be more suitable in a meadow or pasture for example, than next to your patio or home. For this information consult your professional nursery person or appropriate garden books, or call the Master Gardeners.

Plants native to this area of California are more likely to be deer resistant and many have the added bonus of being drought tolerant. (N) indicates that certain species of this plant are native and (D) signifies non-natives that are drought tolerant.

This brochure was compiled by UCCE Master Gardeners of El Dorado County, Spring 1997 updated Fall 2012 and again in Spring 2017. The brochure was then merged with the "Deer-Resistant Plants for the Sierra Foothills (Zone 7) compiled by UC Cooperative Extension Master Gardener of Nevada County. The latter was edited by Cindy Fake, Horticulture and Small Farms Advisor, Placer and Nevada Counties. The UCCE El Dorado, Nevada and Placer County Master Gardeners volunteer organizations under the direction of the University of California Cooperative Extension. Recommendations are based on local experience and from the following sources: Deer Resistant Plants, Gardener's Guide to Preventing Deer Damage, Dept. of Fish & Game, State of California; Cal-Flora, and Sunset Western Garden Book, Lane Publishing Co.

Original contributors: Master Gardeners Sandra Folmer, Steve Savage, and Robin Stanley. Update contributors: Master Gardeners Merry Campbell and Gail Fulbeck.
