

The image is a close-up photograph of a plant surface, likely a leaf, heavily infested with ash whiteflies. The insects are small, pale, and have a waxy, white coating. They are clustered together, covering much of the green surface. The background is a blurred green, suggesting the plant's natural environment. The title 'California Agriculture' is printed in a large, bold, red font across the top. The date and volume information are in a smaller red font in the upper right corner. The species name 'Ash whitefly' is in a red font in the lower left. The footer contains the university and research division information in a small red font.
