**REQUEST FOR STATEMENTS OF INTEREST
NUMBER W9126G-15-SOI-0025
PROJECT TO BE INITIATED IN 2015**

Project Title: San Clemente Island Fox Population Monitoring, San Clemente Island, CA

Responses to this Request for Statements of Interest will be used to identify potential investigators for a project to be funded by U.S. Navy which provides professional and technical support for its Endangered Species Biology Programs in order to facilitate successful implementation of the INRMP and compliance with ESA. Approximately \$264,053.00 is expected to be available to support this project for 2015 (with period of performance extending into 2016).

Background: San Clemente Island (SCI) supports a large number of endemic organisms. Many of these are listed or are being considered for listing as federally endangered or threatened species by the United States Fish and Wildlife Service (USFWS). Populations of Island Fox (*Urocyon littoralis*), a State of California threatened species that occurs solely on six of the California Channel Islands, underwent declines on four of the six islands: San Miguel Island, Santa Rosa Island, Santa Cruz Island, and Santa Catalina Island. In March 2004, the USFWS listed the Island Fox on those islands as federally endangered. While the San Clemente Island fox (*Urocyon littoralis clementae*) was not federally listed, due to concerns regarding subspecies status and long-term population viability, the U.S. Navy, pursuant to the Endangered Species Act and the Sikes Act Improvement Act, signed a candidate Conservation Agreement with the USFWS. This Conservation Agreement (FWS-LA-3287.1) obligates the Navy to monitor the SCI fox population across habitats to determine if fox density varies by habitat and to determine a sound population estimate. In further support of this Conservation Agreement, the Navy developed an Epidemic Response Plan for San Clemente Island Foxes, a plan for detecting and responding to a rapid decline in the island fox population on SCI due to infectious disease or other factors. The potential threat to island foxes posed by an infectious disease is highlighted by the decimation of the Santa Catalina Island fox due to a canine distemper virus epidemic. The impact of an epidemic on SCI foxes will likely depend on how quickly the disease is detected following initial infections. Therefore, the Epidemic Response Plan presents monitoring strategies aimed at early detection of disease to avoid an epidemic. A sentinel fox program is recommended (and is being implemented on other islands with listed island fox populations) that targets unvaccinated, radio-collared foxes to act as “sentinels” for pathogen introduction.

Type of Award:

In accordance with section 6305 – *Using cooperative agreements of the Federal Grant and Cooperative Agreements Act of 1977* (31 U.S.C. § 6301 et seq.), all CESU projects must carry out a public purpose of support or stimulation, instead of acquiring goods or services

for the exclusive direct benefit of the United States Government.

In accordance with section 6305 – *Using cooperative agreements of the Federal Grant and Cooperative Agreements Act of 1977* (31 U.S.C. § 6301 et seq.), substantial involvement is expected between the federal partner and the nonfederal partner when carrying out the activities specified in the project agreement. The exact nature of the government’s involvement will be defined in the statement of objectives, issued with a request for full proposal.

As a result, it is anticipated that a cooperative agreement through the CESU program will be awarded. Such awards may be administered through a CESU only upon mutual agreement and official authorization by both parties of the acceptance of the application of the CESU Network IDC rate (17.5%).

Note: Must be a non-federal partner in the CESU Unit to be qualified to be considered.

Brief Description of Anticipated Work:

This project will conduct:

- I. The 2015 San Clemente Island fox population monitoring (including blood sample collection), assist with fox vaccinations (during trapping), analyze 2015 fox monitoring data, and provide a comparison of 2015 data to the cumulative data set (provided by the Navy).
- II. Sentinel fox monitoring in support of fox conservation (for 6 months beginning August 2015), and reporting to and coordination with the Installation Biologist/NBC Representative on sentinel fox monitoring in support of epidemic disease avoidance.
- III. Attend Island Fox Working Groups Meetings (Ventura June 2015).

Period of Performance. The expected POP is one year from date of award.

Materials Requested for Statement of Interest/Qualifications:

Please provide the following via e-mail attachment to: lucille.r.smith@usace.army.mil
angela.zahid@usace.army.mil (Maximum length: 2 pages, single-spaced 12 pt. font).

1. Name, Organization, Cage Code, Duns number, and Contact Information
2. Brief Statement of Qualifications (including):
 - a. Biographical Sketch,
 - b. Relevant past projects and clients with brief descriptions of these projects,
 - c. Staff, faculty or students available to work on this project and their areas of expertise,
 - d. Any brief description of capabilities to successfully complete the project you may wish to add (e.g. equipment, laboratory facilities, greenhouse facilities, field facilities, etc.).

Note: A full study proposal and proposed budget are NOT requested at this time.

Review of Statements Received: All statements of interest received will be evaluated by a board comprised of one or more people at the receiving installation or activity, who will determine which statement(s) best meet the program objectives. Based on a review of the Statements of

Interest received, an investigator or investigators will be invited to prepare a full study proposal. Statements will be evaluated based on the investigator's specific experience and capabilities in areas related to the study requirements.

Please send responses or direct questions to:
