

Chris Chen is the Integrated Vineyard Systems Advisor for UC Cooperative Extension and covers Sonoma, Mendocino, and Lake Counties. Chris received his Ph.D. from UC Davis in 2021 and has spent the past eight years studying vine responses to abiotic stressors like heat, drought, and salinity. His Cooperative Extension program focuses on finding novel solutions to the challenges posed by climate change in vineyards. Today, he will present on grape cultivars for changing climates and what we can accomplish by optimizing the benefits from the wide variety of wine grapes we already have available to us.
