Outline

1. Introduction
2. Grapevine trunk diseases
3. Management of Powdery mildew
4. Management of Botrytis bunch rot
5. Conclusion

Current project on grapevine

1. *In vitro* fungicide screening via spiral plater
2. Field fungicide trials to manage PM and Gray Mold
3. Grapevine Trunk Diseases
 - Dormant pruning wound protection
 - Biocontrol of GTD
 - Nursery practices for clean plant material
 - Aspergillus vine canker
 - Biocontrol of Pierce's diseases

Grapevine Trunk Diseases

- Young Vine Decline
- Esca
- Eutypa Dieback
- Bot Canker
- Phomopsis Dieback

Unusual fall symptoms on virus free grapevines

Grenache cv./ Freedom

External Symptoms

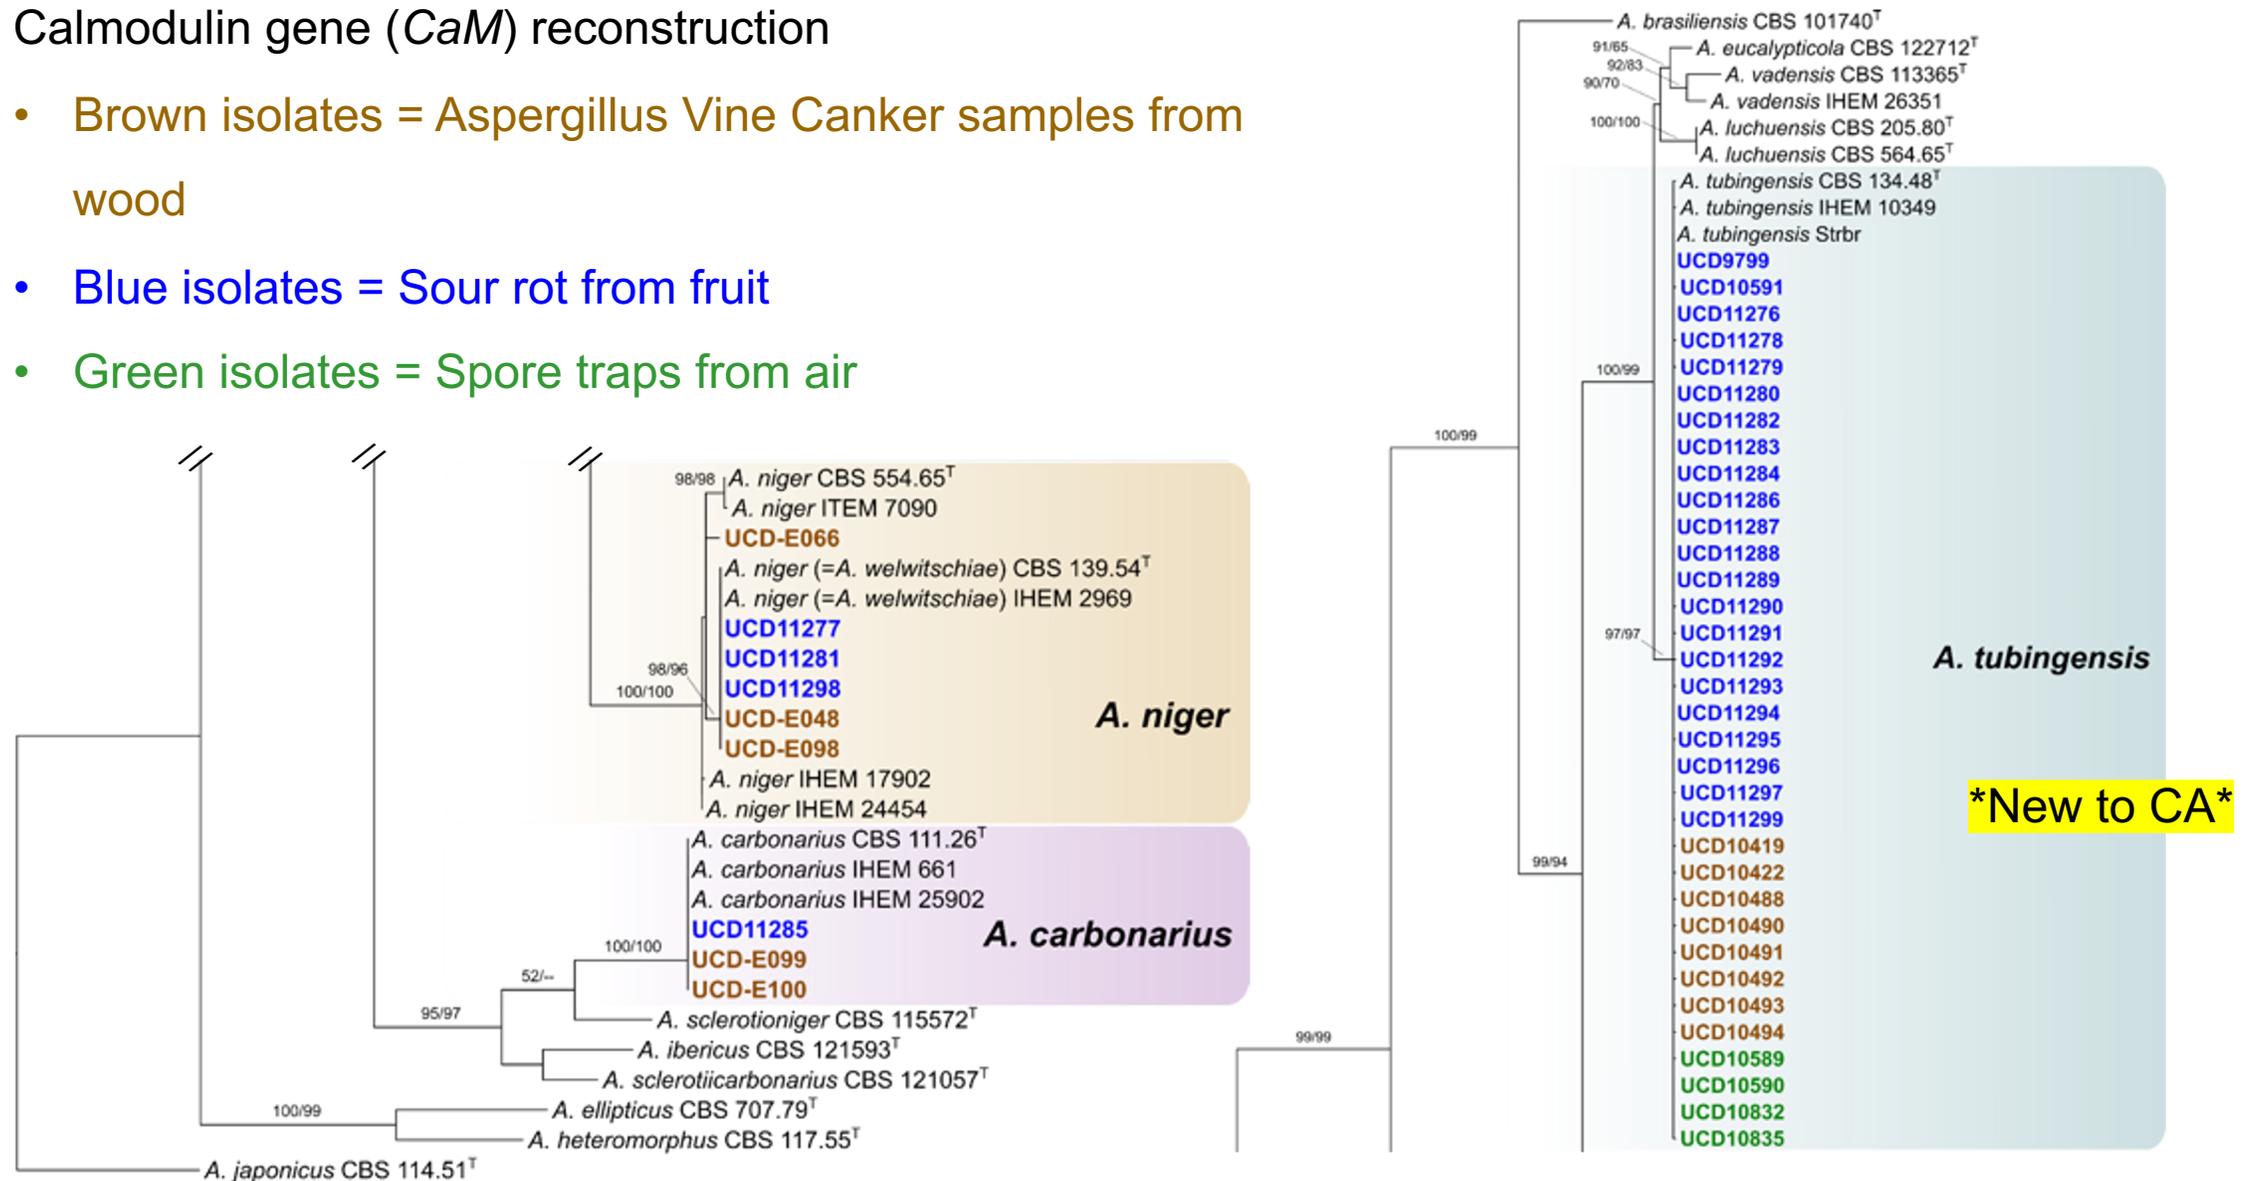

Internal symptoms:

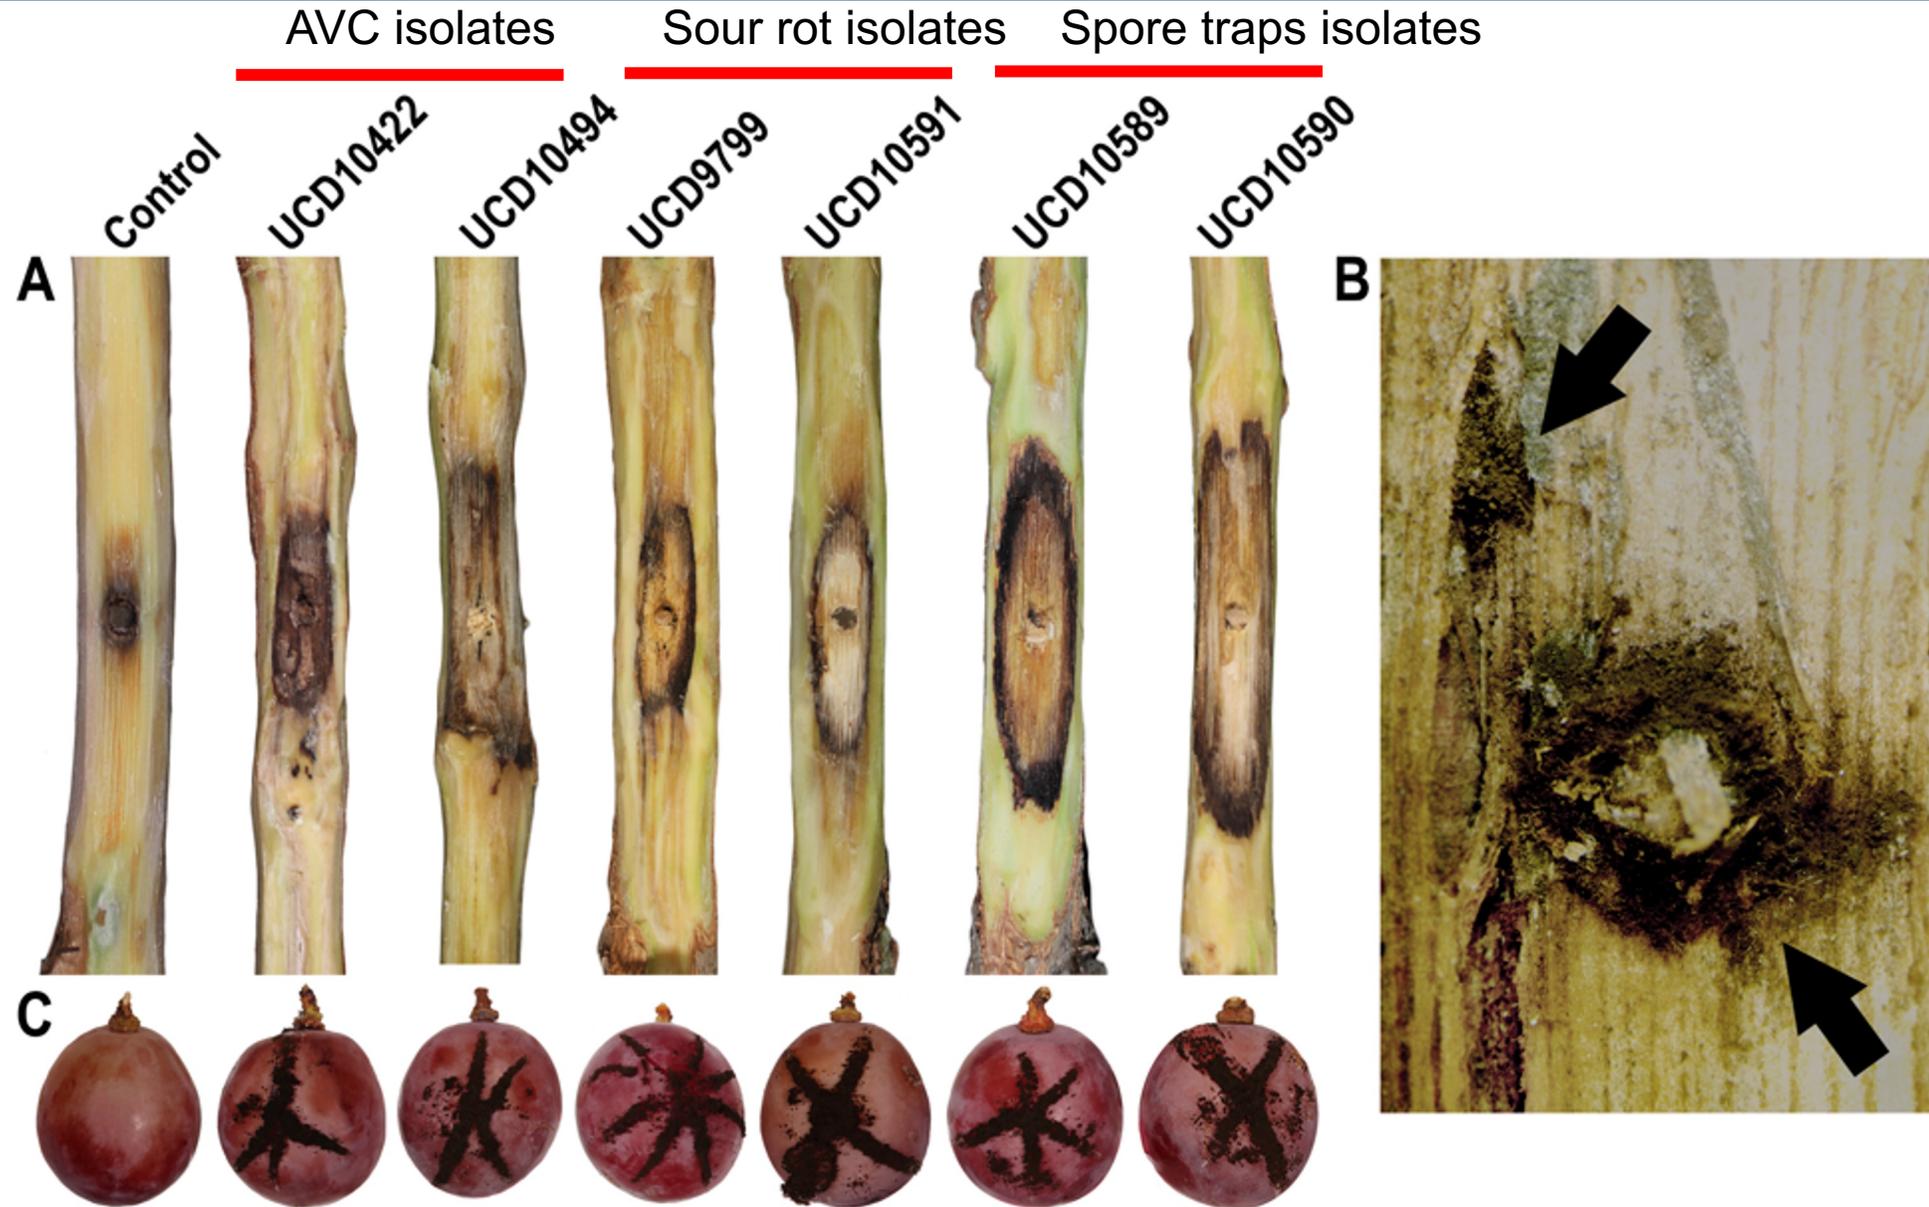

Identification of *Aspergillus* spp.

Calmodulin gene (*CaM*) reconstruction

- Brown isolates = *Aspergillus* Vine Canker samples from wood
- Blue isolates = Sour rot from fruit
- Green isolates = Spore traps from air

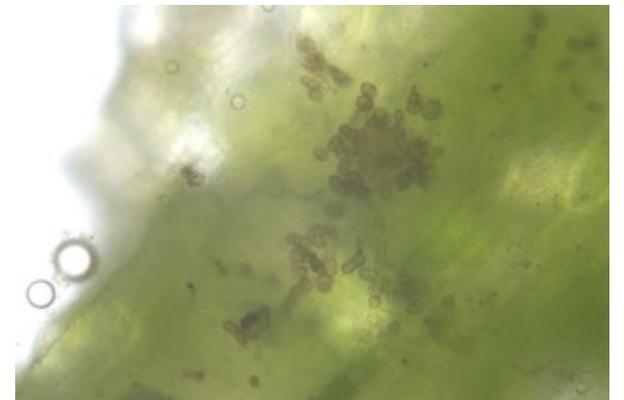

Pathogenicity of *Aspergillus tubingensis*

How do they infect their hosts?

- **Pruning wounds**
- **Latent and Endophyte**

Infection of GTD on different parts of the vine

Sulfur advantages

- Lime sulfur
- Dusting Sulfur
- Wettable sulfur
 - Micronized
 - Dry Flowable
- Is a natural product
- Inexpensive
- Effective
- Used hundreds of years
 - No Case of resistance

Sulfur disadvantages

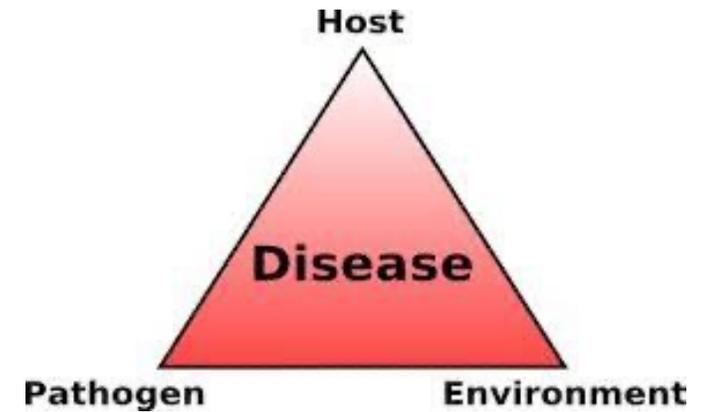

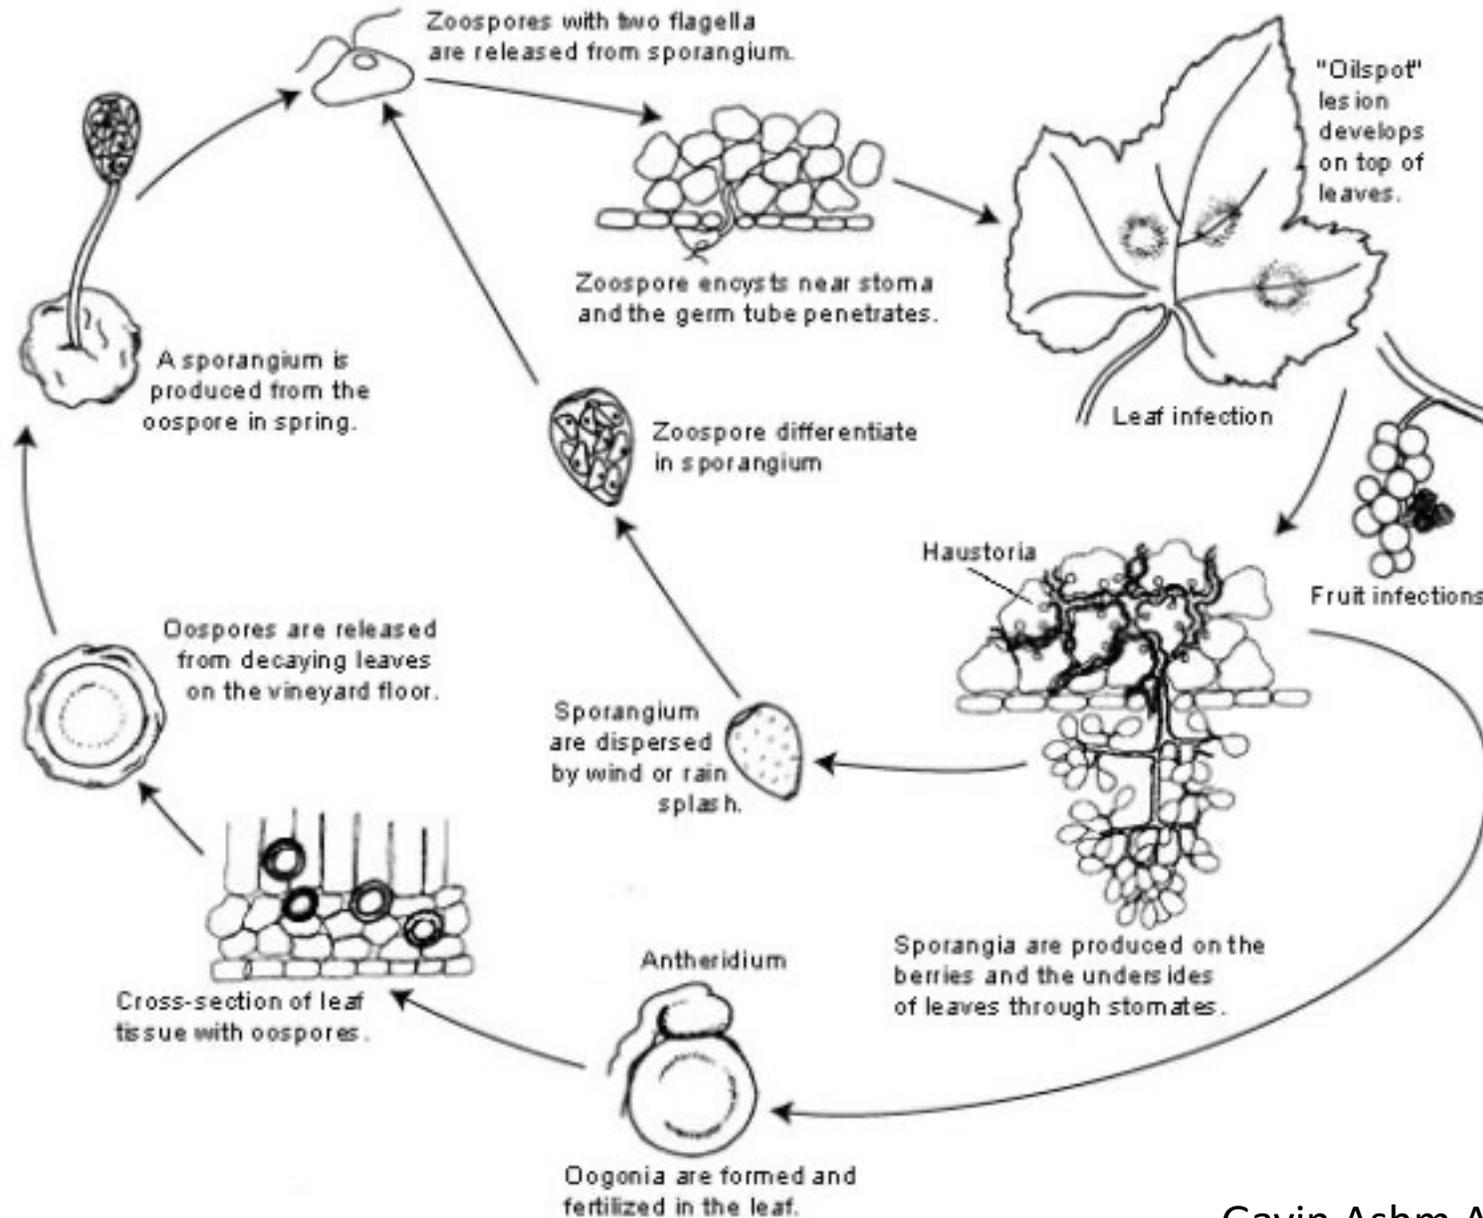

- Washes off easily with rain
- Less effective in cool weather
- May burn wines in hot weather

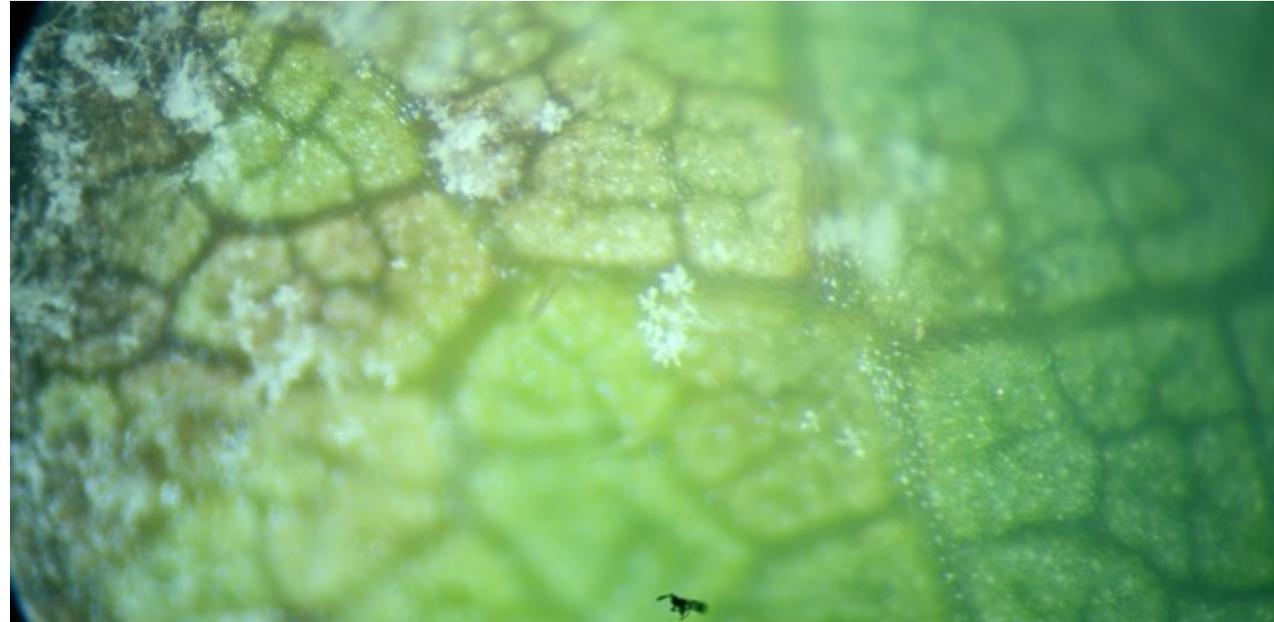

Downy mildew *Plasmopara viticola* of grapevine

Downy mildew of Grape Disease Cycle

Downy mildew *Plasmopara viticola* of grapevine

Management:

Preventive management consists of effective soil drainage and reduction of sources of overwintering inoculum. In a vineyard that depends on sprinkler irrigation, extend the interval between irrigations as long as possible.

Fungicides:

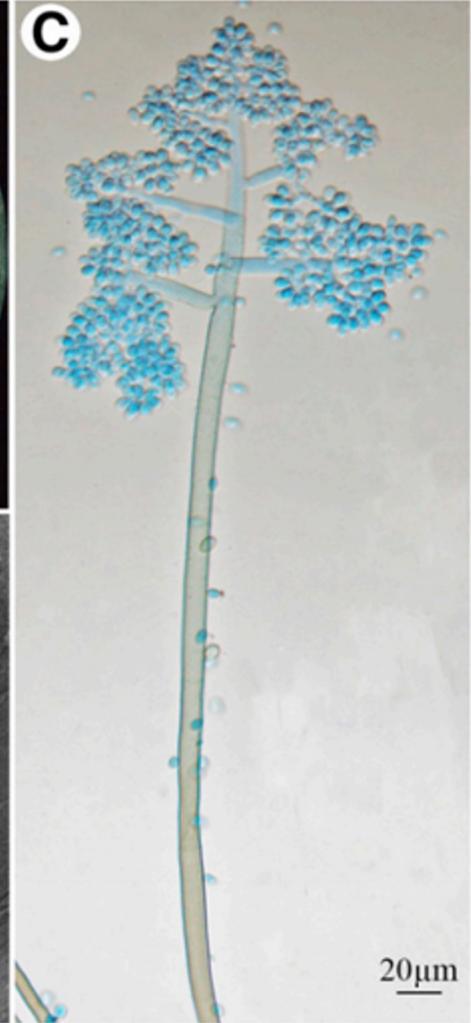

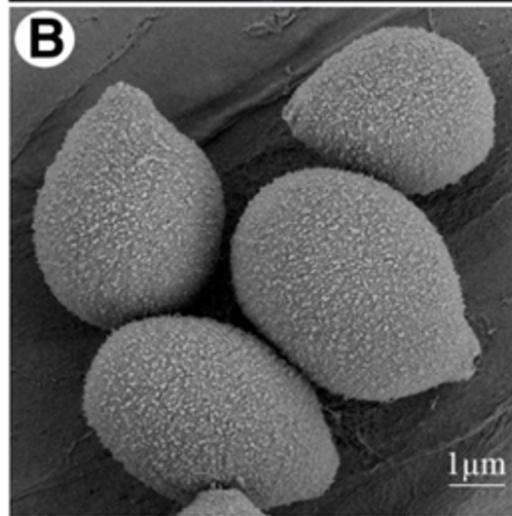

- Phosphonate (fosetyl-aluminum)
- Phenylamides (metalaxyl)
- **QoI (Azoxystrobin)**
- **Carboxylic acid amides (CAA; mandipropamid),**
- Copper Hydroxide

Pathogens involved with Bunch Rot / Gray Mold

Botrytis cinerea

Zhou et al 2018, Plant Disease

Fungus is ubiquitous

Attacks juvenile tissue, ripe fruit Brix >8

After infection, the fungus can produce sclerotia (resting structure).

Summer bunch rot (Sour rot)

- In California, sour rot has been attributed to a complex of microorganisms including *Botrytis cinera*, *Aspergillus niger*, *A. carbonarius*, and others (Latham et al 2008)

Other common symptoms of sour rot

Non-Summer Botrytis symptoms

Black Measles

Esca

Sunburn

Pathogens involved with Summer Bunch rot (Sour Rot)

Aspergillus carbonarius

Aspergillus niger

Aspergillus tubingensis

Cladosporium sp.

Penicillium sp.

Rhizopus sp.
