Hot Weight: weight of carcass immediately after harvest-carcass has not gone to the Cooler yet.

Quality Grade: Quality grades indicate the expected eating satisfaction of lamb. USDA Lamb Quality Grades are based upon palatability indicating characteristics of the lean and carcass conformation.

OCC: Salable Meat from the lamb carcass. Ovine carcass cutability is calculated with yields of rack, roast ready, frenched 3" x 1"; boneless, square cut, shoulder; breast; foreshank; neck; loin, trimmed 0" x 0"; flank; leg, hindshank; and boneless leg, shank-off.

OCC Yield %: OCC yield is calculated by dividing the percentage of the weight of closely-trimmed subprimal/primal cuts by the carcass weight.

Breast: Breast Primal Weight % of Hot Weight

Racks: Rack Primal Weight % of Hot Weight

Shoulders: Shoulder Primal Weight % of Weight

Leg: Legs Primal Weight % of Hot Weight

Loins: Loins Primal Weight % of Hot Weight

Necks: Neck Primal Weight % of Hot Weight

Trotters: Trotter Primal Weight % of Hot Weight

Serial Number: the numerical order in which the carcasses were harvested. Used in the Portal to access the photos of the individual carcasses

Lot # : the order that a group of animals is harvested on a particular day. When the lot starts with "1" it is harvested on a Monday, "2" Tuesday, etc.
