

LEMON

PRUNING SCHEDULE

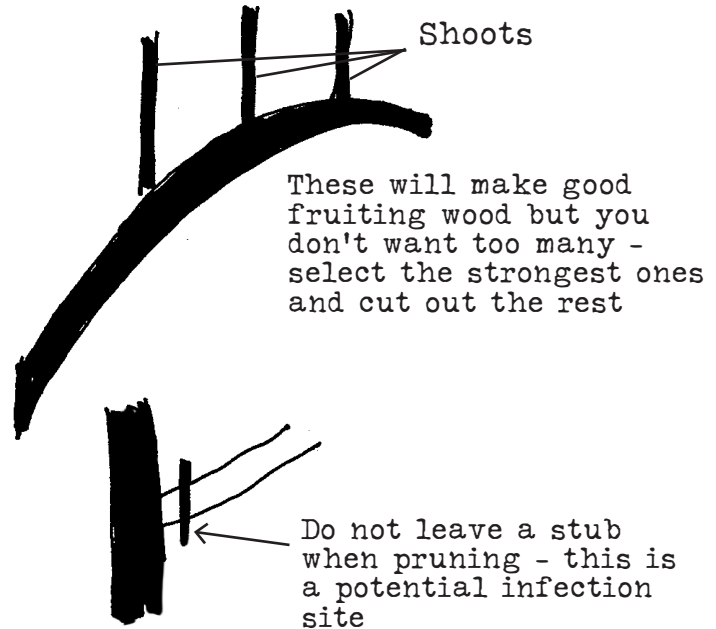

1-4 years - no pruning except to get rid of sucker shoots (better to rub these off or pull them rather than cut them, because cutting encourages regrowth or more shoots)

Older trees

Keep lower branches from hitting the ground - weight will bring them down

Meyer lemons do well here but are sensitive to frost

WHEN TO PRUNE??

Lemon trees are always in flower or fruit.

SUGGESTION:

Late spring or late summer
