

### Drought Dilemma: Reducing Water Use

 $4^{th}$  and  $5^{th}$  Grade

### What Do Plants Need to Grow?

- Soil
- Air/Oxygen
- Water
- Light/Sun
- Food/Nutrition
- Place/Garden

## Parts of a Plant

#### What are the parts of a plant?

- Roots
- Stem
- Flower
- Leaf

#### Where is the Soil?

- Plants take water from the soil
  - Water enters the plant through the tips of the roots.
  - Water must be available in the soil to the root tips for plants to use it.

### Plant Food Sources

- Agriculture
  - Large Farms
- Local Farms
- Home Gardens

What is a drought?

### A drought is a shortage of water from rain and snow

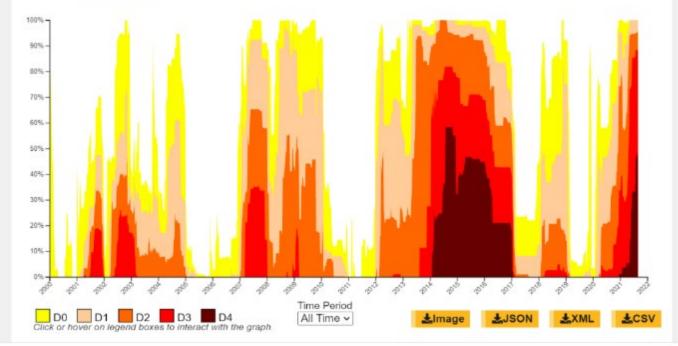

- During a drought we have less water available for people, animals and plants.
- The chart shows changes in California drought conditions from 2000 to 2021.
- Darker areas on chart are times with most extreme drought conditions.

### California areas affected by drought are increasing

2000 - Present (Weekly) 1895 - Present (Monthly) 0 - 2017 (Yearly)

Explore Historical Drought Maps

The U.S. Drought Monitor (USDM) is a national map released every Thursday, showing parts of the U.S. that are currently in drought. The USDM relies on drought experts to synthesize the best available data and work with local observers to interpret the information. The USDM also incorporates ground truthing and information about how drought is affecting people, via a network of more than 450 observers across the country, including state climatologists, National Weather Service staff, Extension agents, and hydrologists. Learn more.

#### Researching Ways to Reduce the Drought Impact: Reduce Water Use

What do you do to reduce water use at home?

### Inside

### Outside

### Home Water Use Inside

- Which of the following ways do you save water **inside** your home?
  - Take short showers
  - Use less water in the bathtub
  - Turn water off when brushing teeth
  - Place a bucket in the shower to catch water
  - Avoid letting water run down the drain; use it for something

### Home Water Use Outside

- Which of the following ways are used to save water **outside** your home?
  - Turn off a hose when not in use
  - Use water saving watering system
  - Have watering system on a timer
  - Water plants in the morning
  - Water plants near the roots system

If you are not sure, ask someone in your household.

### Home Garden Watering Methods

- Precipitation
- Watering Can
- Hose
- Irrigation
  - Drip System
  - Sprinklers

#### How To Water Plants At Home

- Plants need water to the base of the roots to allow the uptake of water and nutrients.
  - Water longer and less often for efficient use of water.
  - Water in the morning to limit evaporation.
  - Water when the soil is dry 1 inch below the surface.
  - Water when plants are stressed
    - Drooping
    - Turning brown
- Plants can die from too much or too little water.

### Agricultural Drought

- <u>Agricultural</u> drought affects crop production or the ecology of an area.
  - This can happen because of poorly planned farming areas. The water that is available in the area has a hard time reaching the plants.
  - An agricultural drought can affect food production and cause food shortages.

#### Agriculture Water Management

Water Sources: Water sources include **rain**, **dams**, wells, rivers, town water, channels and recycled water. The quality and availability vary.

Growing Methods: Drought solutions vary by crop because plant needs vary.

Soil Management: Practices that **increase soil organic matter** will reduce soil-moisture loss.

# Drought Solutions that Could Increase Water for Farm Crops

Taking salt out of water

Capturing rainwater

New water-saving irrigation technology

Developing crops that use less water

**Recycling water**
