Codling Moth are at 845 DD from the 6/3 biofix in the Ashley walnuts we monitor. The next event should be the third biofix in about 7 days.

We had zero NOW eggs over the weekend. We are watching carefully for the third biofix which should be at 1060 DD on old nut food source.

No WHF over the weekend but they are out there so watch carefully.

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
