Codling moth are currently at 1320 Degree Days Following our 6/9 second biofix. So far we have not observed any trap catch increase suggesting the third biofix.

Watch carefully for walnut Husk Fly. We caught 29 flies today ( 7/28) with 3 females with eggs and are applying our second spray. Every orchard is different so use good traps in high catch locations and monitor traps frequently. The walnut Husk Fly CD ( UC 6567D) is available for review .

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
