

NRS (NIFA Reporting System) FAQs - Program Planning and Evaluation

Updated 8/12/2021

Q: Can I include graphics in the Non-Technical Summary and/or Methodology narrative fields?

A: Although the Technical Summary and Methodology fields accept data with graphics, the graphic objects will generally cause the total character count of the data to be greater than the 8,000-character limit for these fields. The suggested alternative is to make the graphic objects available on the web and then include links to the graphic objects in the narrative text for these fields.

Q: I entered one or more projects in error; can these projects be deleted?

A: At this time, projects cannot be deleted, although NIFA has said this capability will be added in the future. In the meantime, change the project name and/or project number of the project(s) you wish to have deleted to make it clear that these projects are NOT to be submitted for review.
