Stories from the Field

with Kristin Dobbin

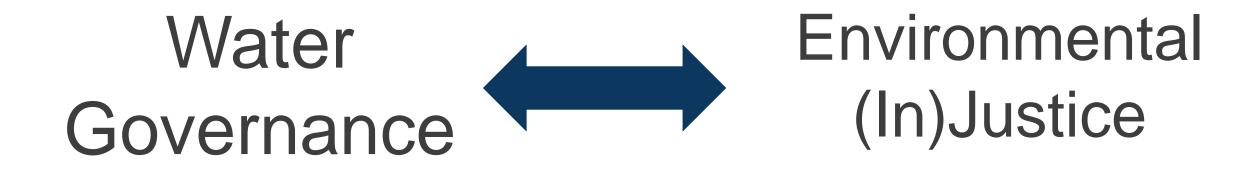

Leveraging policy & governance research for water justice in California Kristin B. Dobbin, PhD Asst. Cooperative Extension Specialist UC ANR & UC Berkeley

UNIVERSITY OF CALIFORNIA Agriculture and Natural Resources

Presentation outline

Background: California's drinking water crisis

Research & extension examples:

- 1. Advancing equitable drinking water access through water system consolidation
- 2. Addressing the needs of "decentralized" water users

California's Human Right to Water Law

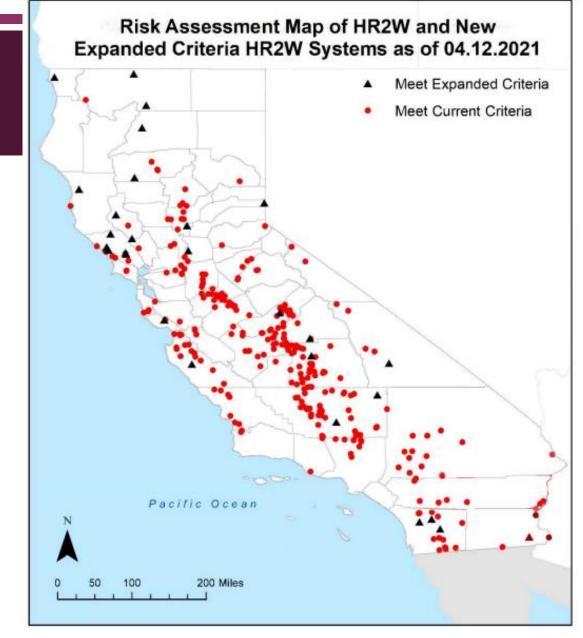

AB 685 (2012) excerpts:

- (a) It is hereby declared to be the established policy of the state that every human being has the right to safe, clean, affordable, and accessible water...
- (b) All relevant state agencies... shall consider this state policy...

Photo: Community Water Center

Water quality challenges

- As of January 2024: 907,263
 Californians are served by noncompliant public water systems.
- More than 6.6 million have been impacted by primary drinking water violations since 2012.
- ~1.5 million Californians served by domestic wells or unregulated small systems with unknown, likely poor, water quality

Data: State Water Resources Control Board, Human Right to Water Portal

Water accessibility challenges

- 5,588 household water outages reported statewide
- More than 150 Public Water
 Systems required emergency assistance
- Tens of millions spent on drinking water assistance

Photo: Community Water Center

Water affordability challenges

- 21% of California water systems estimated to have unaffordable rates by the State Water Board
- A 2021 survey found that ~12% of California have overdue water payments, totaling \$1 billion in collective water debt
- No low-income rate assistance programs for water like other utilities

California households owe \$1bn in water bills as affordability crisis worsens

One in every eight households owes water debt, survey shows, with Black and Latino neighborhoods more likely to be in arrears

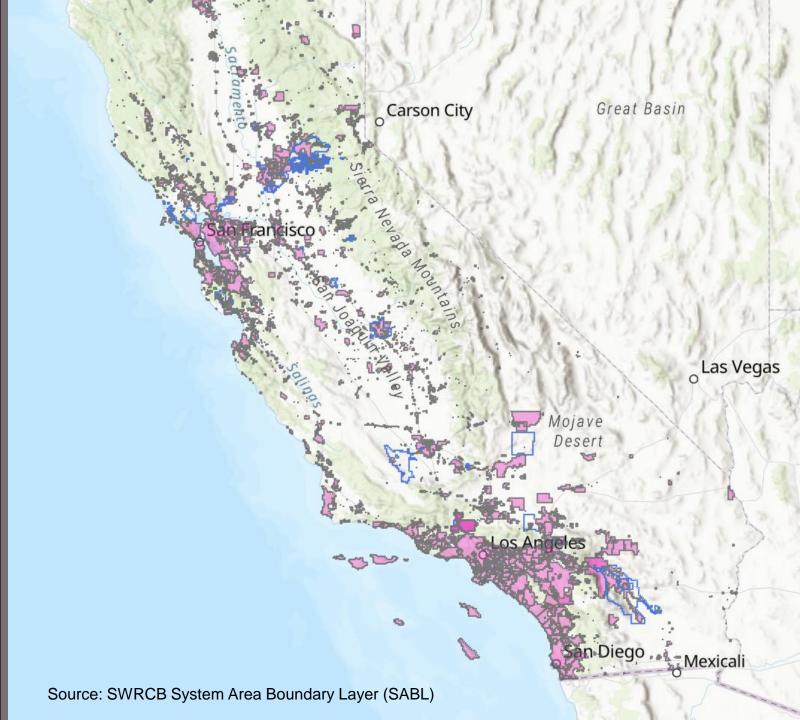

Source: The Guardian, Jan 2021

I AM ONE OF THE MILLION IN CA WITHOUT SAFE WATER

Example 1:

Advancing equitable drinking water access through water system consolidation

Consolidation is the formal merging of some or all governance, management and financial functions of drinking water provision between two or more water system entities

	Increasing Transfer o	f Responsibility	
Informal Cooperation	Contractual Assistance	Shared Governance	Ownership Transfer
Vork with other ystems, but without ontractual bligations	Requires a contract, but contract is under systems' control	Creation of a shared entity by several systems that continue to exist indepen- dently (e.g., regional water system)	Takeover by existing or newly created entity Examples: • Acquisition and physical inter- connection
kamples: Sharing equipment Sharing bulk supply purchases Mutual aid agreements	Examples: • Contracting operation and management • Outsourcing engineering services • Purchasing water	Examples: • Sharing system management • Sharing leadership • Sharing source water • JPA	 Acquisition and satellite mgmt One system transferring owner- ship to another to become a larger existing system or new entity

Using "consolidation" to be inclusive of:

- Regionalization
- Acquisition
- Service extension
- Managerial consolidation

Promoted Benefits of Consolidation

- Increasing economies of scale
- Greater technical, managerial and financial capacity
- Obtaining/retaining qualified staff
- Improving water supply (quality and/or quantity)
- Increasing system sustainability and resilience
- Reducing service burden for community volunteers
- Increasing involvement/role in water planning/policy

Research & Extension Objectives

- Advance our understanding of the role water system consolidations play in increasing sustainable access to safe, affordable drinking water in California, and how consolidation might be leveraged more effectively towards these ends
- 2. Provide information and resources to stakeholders to support the implementation of community-driven consolidation projects

Trends in California Water Systems Consolidation **DECEMBER 2023**

ISSUE

Small water systems are 13 times more likely to violate the Safe Drinking Water Act than large systems and are less resilient in the face of drought and other challenges resulting from the climate crisis. Low-income, rural, and indigenous communities bear the brunt of these consequences, thereby perpetuating inequality. Water system consolidation - or the merging of two or more previously independent water systems - presents one possible solution to many of these challenges.

To advance consolidations, California has developed financial incentives for larger water systems to absorb small systems, introduced new powers to mandate consolidation under specific circumstances, and invested significantly in Technical Assistance resulting in over than 200 completed projects with more underway. Understanding more about these efforts is an important first step towards ensuring that new policies and funding achieve the desired benefits. To this end, UC Berkeley and UCLA researchers compiled a novel dataset of consolidation projects completed between 2015 and 2021.

KEY FINDINGS

Water guality challenges and climate change impacts erally, water systems serving schools and mobile home are driving consolidations. Among systems with data about motives for consolidation, 81% cited water guality compliance concerns. Climate change was the second most common motivating factor cited by more than 10%, including drought, fire, and landslide impacts.

Consolidations involve systems in very close proxim- is the large number of non-Community Water Systems ity. The median distance between consolidations was 0.174 miles for physical consolidations and 0.751 miles for managerial consolidations. Only nine consolidations cent of receiving systems serve under 5,000 customers. spanned more than three miles.

Legend **Consolidated Systems** 3 . Population Served • 0 - 600 601 - 1800 0 1801 - 3500 3501 - 7500 7501 - 17503 Figure 1. Consolidated systems 2015-2021 by population

served.

parks represent a particularly large share of consolidated systems compared to their statewide prevalence.

Both consolidated and receiving systems are generally very small. The median population served by a consolidated water system is just 120. One reason for this that have been consolidated (46%). Receiving systems, in turn, have a median population of 7,061. Forty-five per-

Secondary data analysis of consolidations 2015-2012:

- Consolidations are reaching high priority systems like Mobile Home Parks and schools
- Consolidations involve systems in \bullet very close proximity
- Both consolidated and receiving lacksquaresystems are generally very small
- Water quality challenges and climate ulletchange impacts are driving consolidations

COMING SOON: CALIFORNIA WATER SYSTEM CONSOLIDATION SURVEY

The upcoming California water system consolidation survey seeks to improve our understanding of the opportunities and challenges associated with consolidation and help California communities identify and advance locally appropriate strategies for ensuring safe, affordable, and sustainable drinking water access. In late January 2024, invitations to participate in the survey will be sent via post mail and email to all water systems with active consolidation projects or that have participated in one or more completed consolidations since 2015.

If you receive the invitation, please complete the survey. Your experiences are critical to informing future efforts.

TO LEARN MORE, CONTACT KRISTIN DOBBIN AT (916) 476-2750 OR KBDOBBIN@BERKELEY.EDU

This research is being conducted by the University of California Berkeley and the University of California Division of Agriculture and Natural Resources with funding from the California Institute for Water Resources and the U.S. Geological Survey.

The California water system

consolidation survey:

- Launched Feb 1st 2024
- Collecting responses through
 ~March 31st 2024
- Designed for consolidations in all phases (scoping completed)
- Goals:
 - 1. Understand motivations for consolidation and desired objectives
 - 2. Identify common local challenges
 - 3. Quantify outcomes

PROVIDE INFORMATION AND RESOURCES TO STAKEHOLDERS
