Pollinator Plant Key

Symbol	Description
	Full Sun. Grows best with at least 8 hours per day of unobstructed sunlight.
	Part Shade. Needs filtered light with maximum 4-5 hours of sun per day.
	Shade. Prefers less than 3 hours of sun per day or no direct sunlight.
	Little or low water requirement. Some drought tolerant plants need no supplemental summer water once established (1-2 years after planting), others may require a little water.
	Moderate water. Some summer water - deep soaking every 3-4 weeks.
	Regular water. Summer water required - deep soaking every 1-2 weeks. In hot weather may need to irrigate once or more/week.
	Native to California
	Deer resistant. Deer usually find these plants unpalatable, but during times of severe drought or other extreme pressure, deer may consume.
*	Note: Some varieties may have specific sun and water needs that differ from the genus/species.
