FAIR OAKS HORTICULTURE CENTER NATIVE PLANTS IN THE WATER-EFFICIENT LANDSCAPE GARDEN

The Water Efficient Landscape (WEL) demonstration gardens at the Fair Oaks Horticulture Center show that beautiful gardens can thrive in the Sacramento Valley on low amounts of supplemental summer water. The WEL is composed of various garden areas designed to offer a variety of landscaping options. One of those garden areas is the California Native Plant Garden which contains a large variety of native plants selected for their residential application. Many of the other garden areas also contain native plants intermixed with non-natives. Most plants are labeled with markers denoting both common and botanical names. In addition to water-wise plant selection, the demonstration gardens incorporate various water efficient landscaping techniques. These include the use of compost (to improve soil structure and fertility), drip irrigation, mulch (to reduce soil moisture loss and weed growth), swales (to capture water), and permeable concrete walks and patios (to prevent run-off). With minimal supplemental water and little to no soil amendment, native plants can be kept attractive year around. Natives attract more beneficial insects than non-natives, and they incorporate well into established Mediterranean-type gardens. Following are the plants currently planted in the Water Efficient Landscape Garden with information on the types of wildlife each benefits.

Gardens:

1. Welcome
2. Shade
3. Perennial
4. Popular Plant
5. Native Plant
6. Wildlife Habitat
7. Streetscape

The Fair Oaks Horticulture Center is located at 11549 Fair Oaks Blvd, Fair Oaks, CA 95628
