ADVISOR

UCANR Town Hall April 2025

**SO HOW DID THIS
HAPPEN?**

CALIFORNIA LEGISLATION

01 AB 2596

02 AB 1687

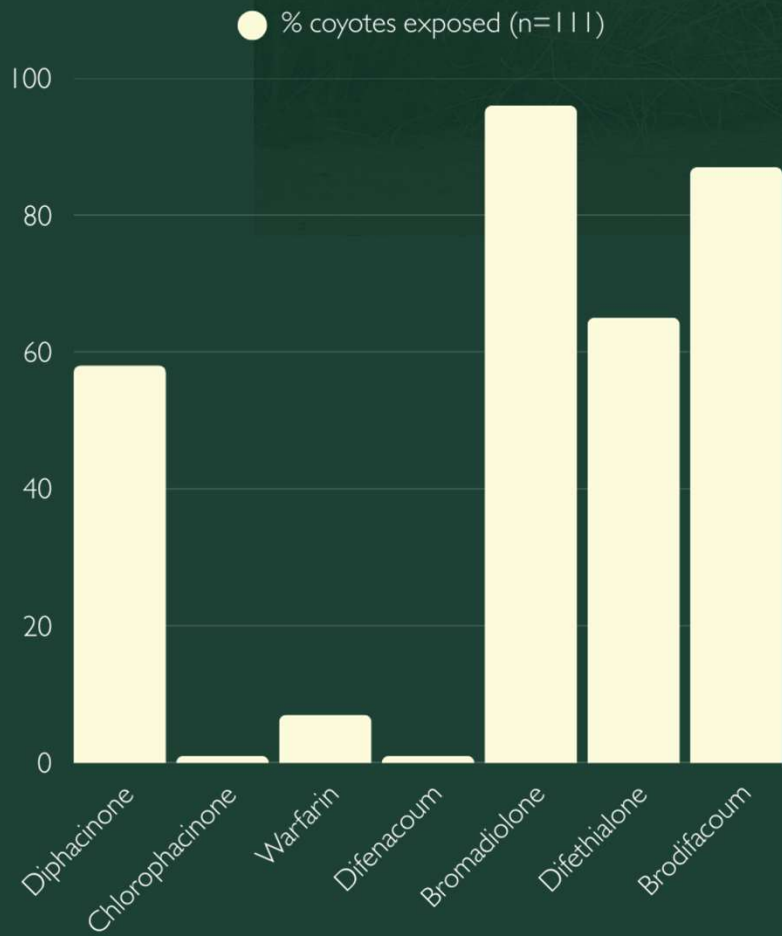

03 AB 1788

04 AB 1322

05 AB 2552

**ARE URBAN
COYOTES EXPOSED
TO RODENTICIDE?**

OH YES!

- 111 coyotes were collected from roadkill and from private trappers across LA and Orange Counties.
- They were necropsied and their livers were removed and sent for analyses to Texas
- 99% of coyotes showed exposure to one or more active ingredients

HOW ARE COYOTES GETTING EXPOSED?

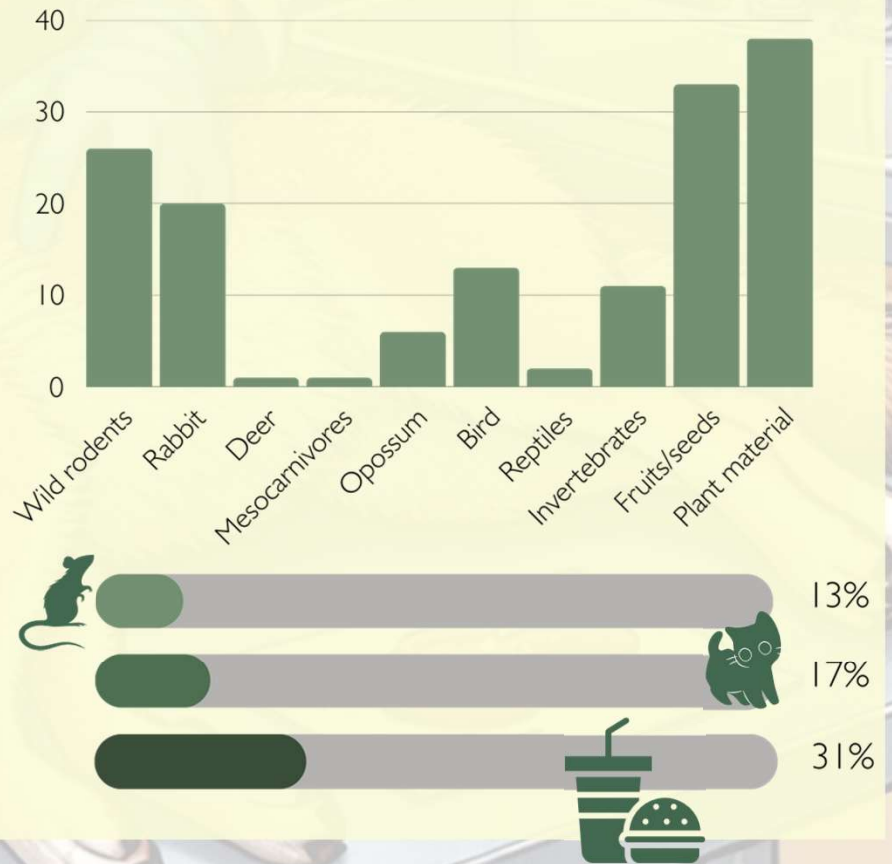

We collected 311 road-killed and nuisance coyotes in Los Angeles and Orange Counties, California

KEY FINDINGS

DIET RESULTS

**IS EXPOSURE OF URBAN
COYOTES OCCURING
FROM LEGAL
APPLICATIONS OF
RODENTICIDE MADE BY
PEST MANAGEMENT
PROFESSIONALS?**

INVESTIGATION OF RODENTICIDE PATHWAYS IN AN URBAN SYSTEM THROUGH THE USE OF ISOTOPICALLY LABELLED BAIT

- Successfully manufactured labelled bait
- Developed methods to detect ARs in hair and feces
- Successfully detected in captive coyotes
- Deployed in pilot study in September 2022
 - 623 scats collected
 - C13DFN detected in 99 scats
 - First detection 14 days after first application

THE DEVELOPMENT OF A NONINVASIVE RODENTICIDE MONITORING NETWORK IN CALIFORNIA

In Orange County and Los Angeles County, we have radio-collared coyotes along urban-natural space corridors

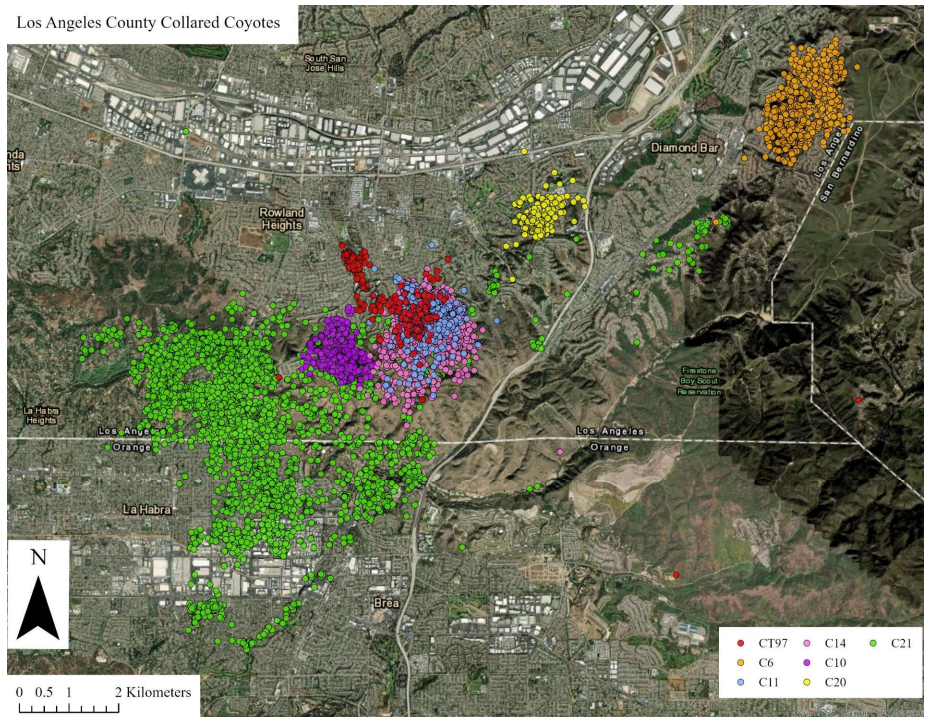

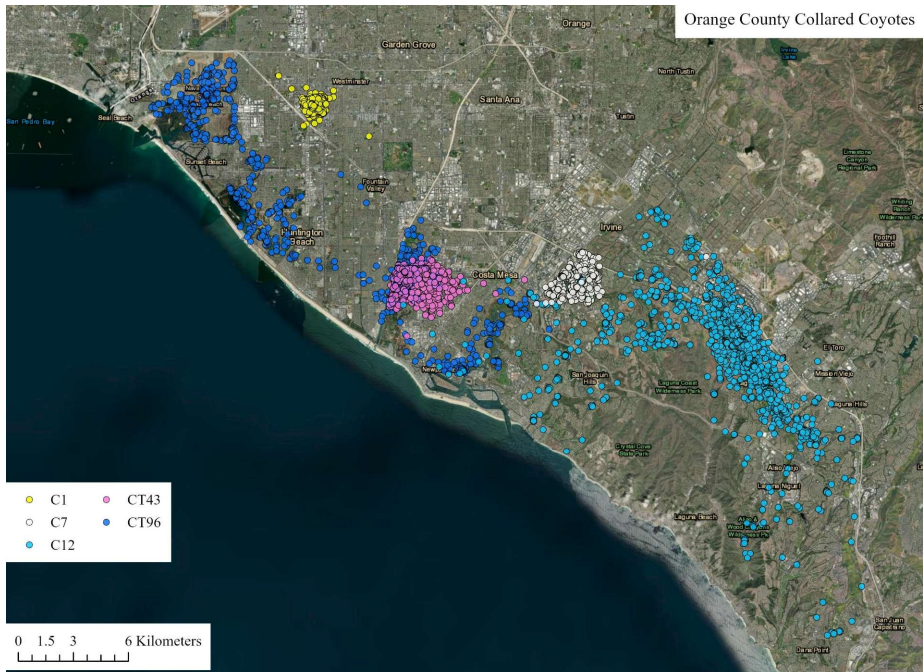

During the collaring process, we collected blood and hair samples for initial rodenticide exposure and an ear biopsy for DNA

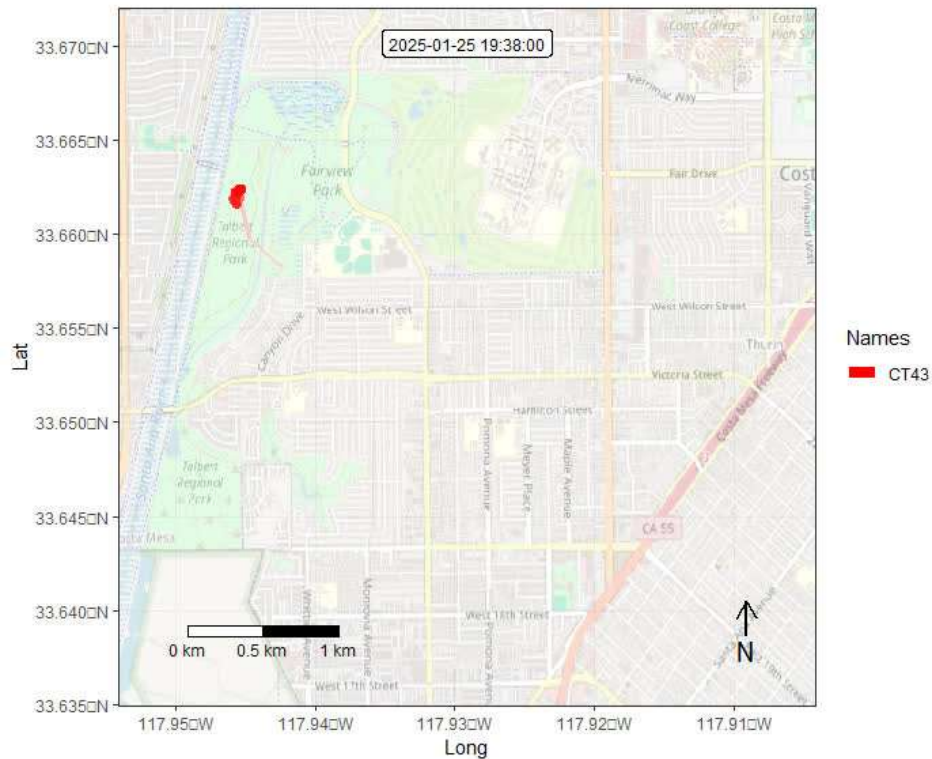

After the coyote was released, each coyote is located approximately twice a week in an attempt to collect fresh feces

COVID-19 Policy Update

Presented by Duwon Choi
ANR Risk & Safety

4/17/2025

COVID-19 Sunset

Overview

- On February 3, 2023, Cal/OSHA's non-emergency COVID-19 prevention regulations went into effect. (CCR-8-3205)
- Except for certain recordkeeping requirements under Section 3205(j), these regulations have **sunset** since **February 3, 2025**.
- All UC locations were allowed to cease compliance with the non-emergency regulations, except for the recordkeeping requirements.

How are ANR employees affected?

- Risk & Safety will no longer mandate isolation or quarantine for affected employees, as well as specific masking guidelines.
- All locations will be recommended to follow the best practices for preventing the spread of respiratory illness. This includes **staying home when sick, voluntarily wearing a mask if symptoms arise, and maintaining good hygiene practices.**
- Employees can **voluntarily** test themselves as well as monitor symptoms and coordinate with their supervisors on working remotely or using sick days if they test positive.
- COVID-19 test kits will **no longer be provided** by ANR.

Reporting is still required...

- As part of the recordkeeping requirement, all employees who test positive for COVID-19 are required to complete the **Illness Screen Report**.
- Will need to report the start of the symptoms, types of symptoms, and the last date of in-person presence.
- No further notifications will be provided.
- Employees are still responsible for following the best practices to prevent the spread of illness.

Illness Screen Report

Print

View Edit Delete Revisions

As of **February 3, 2025**, the non-emergency COVID-19 prevention Regulations (8 CCR 3205) have **expired**, with the exception of recordkeeping requirements under Section 3205(j).

All employees who test positive for COVID-19 can use the Illness Screen Report to report their cases.

This survey should be used by employees in the following conditions:

1. Employees who test positive for COVID-19 should use this survey to report their results.
2. To report COVID-19 Symptoms – employees who have COVID-19 symptoms that are not due to another known or chronic condition are advised to stay home and monitor their symptoms. If symptoms last for more than a day or two, it is recommended to get tested.

Updated COVID-19 Resource

- Please visit our website to review and/or access more information on the changes in COVID-19 Policy.

<https://safety.ucanr.edu>

- The old information on quarantine, isolation, and returning to work can be utilized to continue safety practices in the event of testing positive for COVID-19.

The screenshot displays the website for the University of California Agriculture and Natural Resources (UC ANR) Environmental Health & Safety. The header includes navigation links for Careers, People, Blogs, Events, and For ANR Employees, along with a search bar, My account, Log out, and Donate buttons. The main content area features the title "ANR Environmental Health & Safety" and a search bar. A sidebar on the left lists various resources such as Home, Guidelines, Policies & Procedures, Plans, Forms and Templates, Programs, Safety Training Resources, Safety Notes, Safety Coordinator, Español, About EH&S, and Our Location. The main content area highlights "Environmental Health & Safety Resources for ANR" with a sub-link "COVID-19 Information for ANR Employees" circled in red and a red arrow pointing to it. Below this link, it states "Last update: 2/4/2025". The mission statement reads: "Our mission: Preventing injuries and protecting the environment by providing the best Environmental Health & Safety services to all ANR employees, volunteers, and the public." A map of California is shown below the mission statement, and the UC ANR logo is at the bottom right.

COVID-19 Vaccination

- The UC strongly recommends that all members of the University community stay up-to-date with COVID-19 and influenza vaccinations.
- New Personnel must provide proof of being up-to-date on COVID-19 vaccination or properly decline such vaccination within 14 calendar days of the first date of employment.
- Contact **Pia Marie Wright** (pwright@ucanr.edu) for further assistance on vaccination-related inquiries, including opting out as well as submitting vaccination information.
