

Table 1: Summary of total harvested acreage (“Total”), total harvested organic acreage (“Organic”) and the proportion of total acreage that is organic (“% Organic”) in 2021. For counties where zero is reported for total and/or organic acreage, there was no reporting of the relevant data for that county. The county titled “Sum of Others” is a category of reporting for the State that does not attach a geographic area to the harvested acreage to maintain anonymity when the reporting could easily identify a producer at the county level.

Table 4: Top ten counties by percentage organic of total harvested acreage in 2021. Some counties, such as Orange County, likely had underreporting for total harvested acreage and therefore resulted in a proportion organic over 100% - which demonstrates the discrepancies in data collection and reporting. Total and organic harvested acreage are presented as well.

	% Organic	Organic	Total
Orange	150.1	680	453
Santa Cruz	59.2	6,899	11,659

Table 5: Top ten counties by total harvested organic acreage in 2021. Some counties, such as Lassen and Humboldt, did not report total harvested acreage in 2021 so a proportion organic could not be calculated.

Table 6. Crop categories sorted by proportion of total acreage in organic (“% Organic”) for 2021. The top category, “All other not previously reported or listed”, represents a data collection and reporting approach from the CA State Organic Program. The percentage organic for this category is over 100%, suggesting there is undercounting of total harvest acreage – which may not be surprising given how broad this category is.
