8	244	247	106	108	133	135	1204	1210	1214
Target Weight at Fair	260	260	110	110	140	140	1230	1230	1230

Average daily gains can vary greatly between breeds and even individual animals. The average daily gains here are based on educated estimates of animal gains. It is highly recommended that your own ADGs are calculated throughout your project (they will change) to determine where you fit, and the accuracy of these assumptions. Your ADGs can be placed in this table to adjust the outcomes for your animal. Josh Davy-UC Cooperative Extension-Livestock and Natural Resources
