We all have brought home houseplants, just to see them fade away. Yes, you can be successful growing houseplants. Learn how to select the right houseplant for the lighting in the various rooms in your home. We will share with you the various plants that do well and the general requirements for those plants. Learn about repotting, fertilizing and general cultural care for your houseplants.

# Reducing the Vulnerability of Buildings to Wildfire:

## Vegetation and Landscaping Guidance

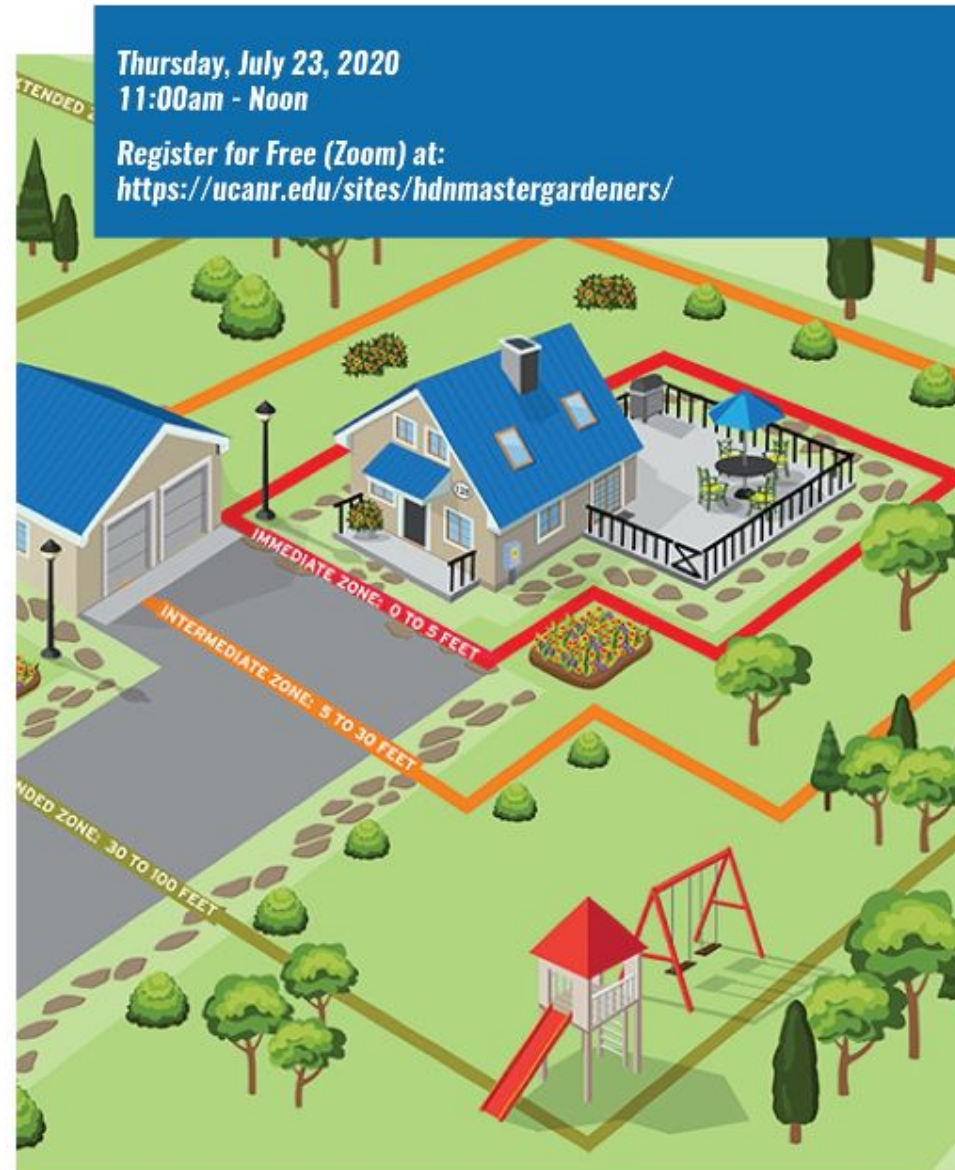

UNIVERSITY OF CALIFORNIA  
Agriculture and Natural Resources

UC Cooperative Extension

Humboldt State University  
LifeLong Learning Lounge

What can be done to improve the chances that a home will survive wildfire? The good news is that research has demonstrated that by careful attention to the selection, location and maintenance of vegetation and other combustibles on the property (i.e., the defensible space on the property), implementing retrofits to "harden" the home, and implementing an ongoing maintenance program, it is possible to substantially improve the odds that a home will survive a future wildfire. These actions do not have to be costly, but they do require an understanding of the three types of exposures a home will experience when threatened by a wildfire.

*The Master Gardener volunteers organize to extend educational services to their communities.*

*The four important areas are: Healthier Plants, Healthier Environment, Healthier Gardeners and Healthier Community*
