4-H members participate on hikes that take place in terrain ranging from relatively flat land to steep, rugged topography and from wetland to desert conditions. Precautions to prevent injuries vary somewhat depending on the type of terrain and habitat encompassed by the path of the hike. Common injuries that are related to hiking include strains, sprains, cuts, bruises, insect bites, and sunburn. By taking several simple precautions and becoming familiar with the area and path to be hiked, 4-H members can control and/or reduce exposure to conditions that may cause injuries. For additional information about hiking safety, go to the Clover Safe note at: http://ucanr.org/cloversafe.
