

Project Development Milestones

The development process for each biomass plant is unique to every project site, the investment partners, and technology developer. West Biofuels views project development in a non-linear phased process that requires flexibility and persistence to successfully achieve the end goal of community-scale biomass heat and power.

- **West Biofuels is a technology provider that works in partnership with project development teams to implement successful biomass-to-energy projects**
- West Biofuels strategically structures its involvement with project development teams to streamline the completion of development milestones in a manner that maximizes the existing capabilities and capacity of the partnership
- **West Biofuels has demonstration plants onsite in Woodland, CA for feedstock testing and continued technological improvements**
