

FOREST STEWARDSHIP IN SONOMA COUNTY

October 4, 2008 near Cazadero

October 18, 2008 in Mill Creek Watershed

These workshops are intended for present and future owners and managers of forest or woodland properties in Sonoma County. Two workshops are being offered. Each will have an indoor session in the morning and field tour in the afternoon. The first will be held near Cazadero, and will focus on forest and watershed health. Foresters, plant pathologists, and watershed and fuels management specialists will present information on the ecology and historical development of the region's forests and discuss threats to forest and watershed health including wild fire, Sudden Oak Death and excessive erosion. Agency representatives will describe programs available to land owners. Tools for long-term land conservation will also be introduced.

The second workshop will be held in the Mill Creek watershed. It will provide an overview of the economic aspects of forest management. Topics to be covered include traditional and non-traditional forest products, biomass utilization, carbon credits, working forest conservation easements, and timber harvest procedures, documents, and regulations.

Large wood placed to improve fisheries habitat, Gualala River
